Journal of
Materials
Processing
Technology

Subject Index of Volume 77

Active filler metal
brazing of Si_3N_4 ceramic to copper, 266
Agglomerates
evaluation of latex binder in the processing of electronic ceramic powder, 108
Alkoxide sol–gel films
the role and interactions of process parameters on the nature of alkoxide derived sol–gel films, 86
Aluminium chips
production of composites from Al and AlMg2 alloy chips, 37
Anhydrous metal halides
nitrides from solid state metathesis reactions: synthesis and mechanistics, 103
Austenitizing
the structure and properties of W–Mo–V high-speed steels with increased contents of Si and Nb after heat treatment, 180
Autoclave consolidation
autoclave consolidation of fibre composites with a high temperature thermoplastic matrix, 80

Bending
quality control in plane-strain bead-forming processes through the load–displacement curve, 145
Blanking
a mechanical device for measuring the displacement and rotation of a blanking or forging press, 70
Bolt
an anti-loosening screw-fastener innovation and its evaluation, 209
Bulge tests
finite-element analysis of bulge forming applying pressure and in-plane compressive load, 95
Bulk forming
computer-aided evaluation of workability in bulk forming processes, 285

Cemented carbide tools
selection of cemented carbide turning tools using EMF and optimization criteria, 59
Ceramic
brazing of Si_3N_4 ceramic to copper, 266
Ceramic processing
holding time in the pressing cycle and its influence on the performance characteristics of zinc oxide varistor discs, 54
Cermet inserts
tool-life reliability of cermet inserts in milling tests, 337
CIGS
thermal annealing of flash evaporated Cu(In, Ga)Se_2 thin films, 260
CNC lathes
automatic cutting-tool condition monitoring on CNC lathes, 64
Combined loading
the effect of weld geometry and residual stresses on the fatigue of welded joints under combined loading, 201
Components
CADPATH: a complete program for the CAD-, CAE- and CAM-winding of advanced fibre composites, 194
Composite materials
testing of composite materials at high rates of strain: advances and challenges, 327
Composites
production of composites from Al and AlMg2 alloy chips, 37
Compression tests
evolution of the friction factor of a molybdenum workpiece during upsetting tests at different temperatures, 240
Condition monitoring
automatic cutting-tool condition monitoring on CNC lathes, 64
Copper
brazing of Si_3N_4 ceramic to copper, 266
Cr steels
optimization of the heat treatment for steam and gas turbine parts manufactured from 9–12% Cr steels, 226
Crystalline metal nitrides
nitrides from solid state metathesis reactions: synthesis and mechanistics, 103
Cutting forces
cutting forces in the end milling of Inconel 718, 153
Cutting performance
tool-life reliability of cermet inserts in milling tests, 337
Cutting tests
tool-life prediction model by design of experiments for turning high strength steel (290 BHN), 319
Cutting-tool
automatic cutting-tool condition monitoring on CNC lathes, 64

Debonding behaviour
modelling of void nucleation and fiber debonding in a composite material, 254
Deep drawing
plastic instability for off-axes loading in deep-drawing operations, 175
Deformation mechanism
study of fractional softening in multi-stage hot deformation, 166
Diffusion bonding
reduction of the stresses introduced during the diffusion bonding of dissimilar materials, 50
Direct brazing
brazing of Si_3N_4 ceramic to copper, 266
Directional-solidification
a computer-aided approach for the simulation of the directional-solidification process for gas turbine blades, 160
a computer-aided approach for the simulation of the directional-solidification process for gas turbine blades, 160
Displacement
a mechanical device for measuring the displacement and rotation of a blanking or forging press, 70
Dry milling
tool-life reliability of cermet inserts in milling tests, 337

Elsevier Science S.A.
PII S0924-0136(98)00097-1

Ductile growth model
a ductile growth model for elasto-plastic material, 9

Elasto-plastic material
a ductile growth model for elasto-plastic material, 9
Energy absorbtion
failure modelling for ZnO varistors, 273
Error detection
quality control in plane-strain bead-forming processes through the load–displacement curve, 145
Eutectic alloys
effect of process variables on structure and properties of aluminium–silicon piston alloy, 122
Extrusion parameters
production of composites from Al and AlMg2 alloy chips, 37

Factorial experiment design
the role and interactions of process parameters on the nature of alkoxide derived sol–gel films, 86
Faliure modelling
failure modelling for ZnO varistors, 273
Fatigue strength
the effect of weld geometry and residual stresses on the fatigue of welded joints under combined loading, 201
Ferritic steel
the effect of high pressure hydrogen on the creep fracture of notched ferritic-steel components, 25
Ferrous sintered alloys
upon the advantages of the application of gas carbonitriding for ferrous sintered alloys, 73
Fiber composites
autoclave consolidation of fibre composites with a high temperature thermoplastic matrix, 80
Fibre composites
CADPATH: a complete program for the CAD-, CAE- and CAM-winding of advanced fibre composites, 194
Filament winding
CADPATH: a complete program for the CAD-, CAE- and CAM-winding of advanced fibre composites, 194
Finite-element analysis
an investigation of plane-strain lateral extrusion to form components having staggered branches, 305
finite-element analysis of bulge forming applying pressure and in-plane compressive load, 95
Finite element method
quality control in plane-strain bead-forming processes through the load–displacement curve, 145
Fluid flow
a mathematical model of heat transfer and fluid flow in the gas metal arc welding process, 17
Forging
a mechanical device for measuring the displacement and rotation of a blanking or forging press, 70
Forming-limit diagram
process signatures and finite elements in metal sheet forming, 134

Gas carbonitriding
upon the advantages of the application of gas carbonitriding for ferrous sintered alloys, 73
Gas metal arc welding
a mathematical model of heat transfer and fluid flow in the gas metal arc welding process, 17
Gas metal arc welding process
the prediction of the temperature distribution and weld pool geometry in the gas metal arc welding process, 233
Gas turbine blades
a computer-aided approach for the simulation of the directional-solidification process for gas turbine blades, 160
Grain refinement
a new method of fine grained casting for nickle-base superalloys, 300

Hardening
upon the advantages of the application of gas carbonitriding for ferrous sintered alloys, 73
Heat transfer
a mathematical model of heat transfer and fluid flow in the gas metal arc welding process, 17
Heat treatment
optimization of the heat treatment for steam and gas turbine parts manufactured from 9–12% Cr steels, 226
High speed steels
the structure and properties of W–Mo–V high-speed steels with increased contents of Si and Nb after heat treatment, 180
Holding time
holding time in the pressing cycle and its influence on the performance characteristics of zinc oxide varistor discs, 54
Hydro-dynamic pressure
hydro-dynamic pressure distribution in tapered, stepped parallel bore and complex geometry pressure units: experimental results, 294
Hydrodynamic pressure unit
modelling of the pressure distribution within a hydrodynamic pressure unit: Effect of the change in viscosity during drawing of wire coating, 32
Hydrogen attack
the effect of high pressure hydrogen on the creep fracture of notched ferritic-steel components, 25

IMI318 titanium alloy
effects of nitrogen gas flow rates on the microstructure and properties of laser-nitrided IMI318 titanium alloy (Ti–4V–6Al), 115
Impact loading
testing of composite materials at high rates of strain: advances and challenges, 327
Induced porosity increase
a ductile growth model for elasto-plastic material, 9
Industrial wear problems
methods of wear testing for advanced surface coatings and bulk materials, 246
Intensity of tool wear
selection of cemented carbide turning tools using EMF and optimization criteria, 59
Intrinsic defect levels
thermal annealing of flash evaporated Cu(In, Ga)Se_2 thin films, 260

Joining
brazing of Si_3N_4 ceramic to copper, 266

Laser surface melting
effects of nitrogen gas flow rates on the microstructure and properties of laser-nitrided IMI318 titanium alloy (Ti–4V–6Al), 115
Lateral extrusion
an investigation of plane-strain lateral extrusion to form components having staggered branches, 305
Latex binders
evaluation of latex binder in the processing of electronic ceramic powder, 108
Lithium nitride
nitrides from solid state metathesis reactions: synthesis and mechanistics, 103

Loading case
finite-element analysis of bulge forming applying pressure and in-plane compressive load, 95
Loads
quality control in plane-strain bead-forming processes through the load–displacement curve, 145
Loosening
an anti-loosening screw-fastener innovation and its evaluation, 209

Machinability
machinability of nickel-base super alloys: a general review, 278
Martensite matrix
the structure and properties of W–Mo–V high-speed steels with increased contents of Si and Nb after heat treatment, 180
Materials
a personal glimpse of the life and works of William Johnson: a researcher of materials processing technology and an engineering educator, 1
Medium-carbon steel
study of fractional softening in multi-stage hot deformation, 166
Metal forming
process signatures and finite elements in metal sheet forming, 134
quality control in plane-strain bead-forming processes through the load–displacement curve, 145
Metal-matrix composite
modelling of void nucleation and fiber debonding in a composite material, 254
Milling modes
cutting forces in the end milling of Inconel 718, 153
Molybdenum
evolution of the friction factor of a molybdenum workpiece during upsetting tests at different temperatures, 240
Multiaxial creep fracture
the effect of high pressure hydrogen on the creep fracture of notched ferritic-steel components, 25
Multi-stage compression
study of fractional softening in multi-stage hot deformation, 166

n-GaAs
properties of Pd/Sn Ohmic contacts on n-GaAs, 42
Nickel-base
machinability of nickel-base super alloys: a general review, 278
Nickel-base alloy
cutting forces in the end milling of Inconel 718, 153
Nitrogen gas flow rates
effects of nitrogen gas flow rates on the microstructure and properties of laser-nitrided IMI318 titanium alloy (Ti–4V–6Al), 115

Off-axes loading
plastic instability for off-axes loading in deep-drawing operations, 175
Ohmic contacts
properties of Pd/Sn Ohmic contacts on n-GaAs, 42
Optical pressure-mapping device
production and evaluation of textured polymer sheets as optical pressure-sensing interfaces, 129
Optimum cutting speed
selection of cemented carbide turning tools using EMF and optimization criteria, 59
Organic additives
evaluation of latex binder in the processing of electronic ceramic powder, 108

Piston alloy
effect of process variables on structure and properties of aluminium–silicon piston alloy, 122
Plane-strain
an investigation of plane-strain lateral extrusion to form components having staggered branches, 305
Plasto-hydrodynamic
formation and remelting of a solid polymer layer on the wire, in a polymer melt chamber, 314
Polymer melt
hydro-dynamic pressure distribution in tapered, stepped parallel bore and complex geometry pressure units: experimental results, 294
Pressure distribution
modelling of the pressure distribution within a hydrodynamic pressure unit: Effect of the change in viscosity during drawing of wire coating, 32
Pressure-sensing interfaces
production and evaluation of textured polymer sheets as optical pressure-sensing interfaces, 129
Processing technology
a personal glimpse of the life and works of William Johnson: a researcher of materials processing technology and an engineering educator, 1
Process parameters
the role and interactions of process parameters on the nature of alkoxide derived sol–gel films, 86
Process signatures
process signatures and finite elements in metal sheet forming, 134
Process variables
effect of process variables on structure and properties of aluminium–silicon piston alloy, 122

Relative fracture index
computer-aided evaluation of workability in bulk forming processes, 285
Research
a personal glimpse of the life and works of William Johnson: a researcher of materials processing technology and an engineering educator, 1
Residual stresses
the effect of weld geometry and residual stresses on the fatigue of welded joints under combined loading, 201
Rotation
a mechanical device for measuring the displacement and rotation of a blanking or forging press, 70

Screen printing
production and evaluation of textured polymer sheets as optical pressure-sensing interfaces, 129
Screw Fastener
an anti-loosening screw-fastener innovation and its evaluation, 209
Semiconductors
thermal annealing of flash evaporated Cu(In, Ga)Se_2 thin films, 260
Silicon carbide
modelling of void nucleation and fiber debonding in a composite material, 254
Silicon Nitride
brazing of Si_3N_4 ceramic to copper, 266
Solidification
a new method of fine grained casting for nickle-base superalloys, 300
Solid polymer melts
formation and remelting of a solid polymer layer on the wire, in a polymer melt chamber, 314

Steel
effects of the stress-relief conditions on a martensite stainless-steel welded component, 216
tool-life prediction model by design of experiments for turning high strength steel (290 BHN), 319
Strain rate
testing of composite materials at high rates of strain: advances and challenges, 327
Stress in joints
reduction of the stresses introduced during the diffusion bonding of dissimilar materials, 50
Stress relief
effects of the stress-relief conditions on a martensite stainless-steel welded component, 216
Stress states
plastic instability for off-axes loading in deep-drawing operations, 175
Superalloy
a new method of fine grained casting for nickle-base superalloys, 300
Super alloys
machinability of nickel-base super alloys: a general review, 278
Surface profilometry
properties of Pd/Sn Ohmic contacts on n-GaAs, 42

Temperature distribution
the prediction of the temperature distribution and weld pool geometry in the gas metal arc welding process, 233
Temperature profile
formation and remelting of a solid polymer layer on the wire, in a polymer melt chamber, 314
Test equipment
methods of wear testing for advanced surface coatings and bulk materials, 246
Thermal effects
reduction of the stresses introduced during the diffusion bonding of dissimilar materials, 50
Thermal properties
evolution of the friction factor of a molybdenum workpiece during upsetting tests at different temperatures, 240
Thermoplastic matrix
autoclave consolidation of fibre composites with a high temperature thermoplastic matrix, 80
Tool-life
tool-life prediction model by design of experiments for turning high strength steel (290 BHN), 319
Tungsten powder
production of composites from Al and AlMg2 alloy chips, 37
Turbine blades
optimization of the heat treatment for steam and gas turbine parts manufactured from 9–12% Cr steels, 226

Viscous fluid
hydro-dynamic pressure distribution in tapered, stepped parallel bore and complex geometry pressure units: experimental results, 294

Wear testing
methods of wear testing for advanced surface coatings and bulk materials, 246
Welded joints
the effect of weld geometry and residual stresses on the fatigue of welded joints under combined loading, 201
Welding
effects of the stress-relief conditions on a martensite stainless-steel welded component, 216
Weld pool geometry
the prediction of the temperature distribution and weld pool geometry in the gas metal arc welding process, 233
Wire coating
modelling of the pressure distribution within a hydrodynamic pressure unit: Effect of the change in viscosity during drawing of wire coating, 32
Workability
computer-aided evaluation of workability in bulk forming processes, 285

Zinc oxide varistors
holding time in the pressing cycle and its influence on the performance characteristics of zinc oxide varistor discs, 54
ZnO varistors
failure modelling for ZnO varistors, 273
